

I think, however, our material
will be sufficient to obtain
some interesting geographical
results.

You will shortly receive the
second part of my Diag. N. Nov.
together with prospectus of the
main work.

Mr. Watson has kindly sent me
some corrections, for which I am
extremely obliged to him, and I will
write to him when I am less pressed.
Howard & Chatter, Dr. Engelmann
would care to revise my almost
interminable catalogue of *Caetaceae*;
half of them must be revised,
and nothing more.

I don't like to ask him, because
Dr. Parry informs me he is in bad
health, yet possibly he might like
to give his authority to it.

Thanking you very much for
your kind letter, I remain

Yours faithfully

W. H. Hensley

New
June 4 1879

Dear Dr. Gray

I have not touched
Dr. Parry's *Compositae*, but
previous to receiving his
collection, I had commenced
describing some of what
I regarded as undescribed

species which those
already described are:

Gutierrezia Coulteri (Gray)

Milactis brevilinguata (Gray)

Desmodium Lemmonii (Gray)

Pluchea auriculata, (Gray)

Florimunda (Gray)

(Kinder, 1171)

Chiodena corymbosa, (Gray)

(Lemmon, 1994)

Zaluzgia Coulteri Hand
(Coulter 358.)

Lagotis biflora Hand
(Parkinson)

" *heterophyllus* "
(Parkinson)

" *desipiens* "
(Seymour 2086.)

Salisorg filiformis, Hand
(Seymour, 1473).

And I have taken out the
following numbers for examination
and possible description

Boltar: 1145-1146 1150 1131 1147

Coulter: 451, 349, 362, 423, 421, 335
326 358

Falcetti: 2224, 2024, 2432.

Jurgensohn: 124

Andrieux: 304

Seymour: 1485, 1489, 1464.

E. H. Johnson: 24

Gregg: 382

Hourgau: 1075, 837, 3097, 827, 2994
1551, 2687, 1204, 378, 1565, 3206

Of course many of the foregoing
may turn out described species.
In any case I shall not
touch ^{city} Harry and Salazar's *Compositae*
on the foregoing, before I have
your determinations. I am
glad you have taken them
in hand.

I send you proof of three
plates of *Compositae* and those
of another of *Lagotis* of
which I have no duplicate
by me.

My skeleton flora will
benefit greatly from Dr. Harry's
collection, both by additions
and corrections; but of course
it will be nothing more
than a rough catalogue.
I regret that Mr. Seymour has
determined to print it in a
very grand style, to correspond
to the zoological parts, which
are all critically elaborated.
